Subject: Thompson Street Parking Structure Addition

Action Requested: Approval of Schematic Design

Background:

At the January 2007 meeting, the Regents approved the Thompson Street Parking Structure Addition project and the appointment of the design firm of Carl Walker Inc. for its design. The addition to the Thompson Street Parking Structure is an integral part of the University's Parking and Transportation strategic plan to provide parking for anticipated incremental growth in demand, and to replace parking lost on central campus due to various construction projects, including Joan and Sanford Weill Hall and the Perry Building addition. The project involves a 385-space parking structure addition to the west side of the Thompson Street Parking Structure, and 9,000 gross square feet of office and support space for the departments of Parking and Transportation Services and the Office of Budget and Planning. The existing Thompson Street Parking Structure and parking lots within the development zone currently provide 776 parking spaces. When the addition is complete, the entire parking structure will accommodate approximately 1,060 vehicles, for a net increase of 284 parking spaces.

The estimated cost of the project is $15,700,000. Funding will be provided from Parking resources. The construction cash flow may be provided, all or in part, by increasing the commercial paper issuance under the commercial paper program, secured by a pledge of General Revenues, and authorized by the Regents. Construction is scheduled to be completed in Fall 2009.

We recommend that the Regents approve the schematic design for the Thompson Street Parking Structure Addition project as presented at the meeting.

Respectfully submitted,

Timothy P. Slottow
Executive Vice President and
Chief Financial Officer
